Docker Compose: Cas d'usage avec scaling

Cas pratique: Scaler l'application backend pour plusieurs instances

```
version: "3.8"
services:
  backend:
    build: ./backend
    environment:
      DATABASE_URL: postgres://myuser:mypassword@db:5432/mydatabase
    ports:
      - "5000:5000"
    deploy:
      replicas: 3
      resources:
        limits:
          cpus: "0.5"
          memory: "256M"
    networks:
       backend
```
